**Use Case 1 (Users Side): This is the implementation of the use case.**

**Participating actors:**

This use case is for Travellers visiting the platform.

**Brief Description:**

This use case allows users to access the platform by a specific URL. This will give them access to a page where they can simply input their personal log in details (username, password) to access the site.

**Basic Flow of the Events:**

1. The use case starts when the user gets the URL and access the platform.
2. The system ask the user for their log in details to access the platform.
3. The system then responds with a message that the login was successfully completed.

**Alternative Flow of the Events:**

1. In case the user does not have an account they should be able to access the registration page.
2. The system will then ask for the user's personal details example, first name, second name, email and password which the system will store in the database.
3. After that, the system will respond by telling the user that the account is now created and they should log in.

**Rules:**

1. A user must perform an action for the system to the response.
2. In case the user is not registered in the system they will have to register otherwise they can not access the platform.
3. Information filled into the login and signup form must be of the right order example if the system expects and email, user should provide an email.

**Notes:**

Every user must read the terms and conditions before providing their information.
